Since the function is a polynomial, (all of) the derivatives must exist for all real numbers, so the

n, that is,  $n = k$  where  $k$  is a positive integer, and let  $a$  be a real number different from 0. We define  $a^k$  to be the real number given by  $a^k = 1$  if  $k = 0$  and  $a^k = a \cdot a^{k-1}$  if  $k > 0$ .  
(3) (i) Let  $a$  be a real number different from 0. We define  $a^{-k}$  to be the real number given by  $a^{-k} = \frac{1}{a^k}$  if  $k > 0$  and  $a^{-k} = a^k$  if  $k < 0$ .

We will also give the properties of radicals and some of the common mistakes students often make with radicals. We will also define simplified radical form and show how to rationalize the denominator.
